

What Egusin® Does

Neutralizes Gastric Acid:

- Antacids- are known to be gastric acid neutralizing buffers, which provide instant and sustained neutralization of excess corrosive gastric acid to protect the stomach lining against destruction.

Protects/Coats Gastric Mucosa:

- Pectin acts as a barrier for the gastric mucosal membranes against excess gastric acid.
- Beta-glucan gels in the stomach, acting as a coating for the stomach lining.
- Lecithin- a phospholipid proven to protect the hydrophobic lining of the gastric mucosal membranes and epithelial surfaces against destruction from corrosive gastric acid and aid in re-establishing the stomach lining. Lecithin also contains natural antioxidants which aid in protecting the muscle cells from degradation by the free radicals.

Stabilizes Intestinal Function:

- Contains dietetic soluble fibers which improve and stabilize function of the stomach and colon as well as stimulate the appetite.
- Micro-milled whole oats (groats) with a high content of fibers have a positive dietetic impact on the intestinal system.

Promotes Intestinal Absorption:

- Insoluble oat fibers delay the stomach emptying which can aid in preventing gastrointestinal disorders.
- Rich in fiber which increases the viscosity of the intestinal content.

Binds Toxins:

- Dietetic fibers bind to gram-negative bacteria.
- Pectin binds to toxins that can contribute to diarrhea.

Ease of Dosing/Regimen:

- Easy to administer, no waste dustless top dress
- Palatable formulation that is mixed into feed concentrate
- Horses willingly eat
- Contains no prohibited drugs
